

Virtual Future of Work in Healthcare

Meeting shifting demands and paving the way to healthcare's workforce of the future

Online | Monday, June 21, 2021 | Start: 12:00pm ET / 9:00am PT

Agenda Overview

The demand for healthcare workers is predicted to increase over the next decade, but it is also predicted that the healthcare industry will face significant worker and skill shortages in the same timeframe. This shortage of qualified and skilled clinicians and other clinical and non-clinical staff presents a gap that will impact the ability of any healthcare system around the world to deliver care safely and scale organizations into the future. While the gap will differ by country, province, and even by town, hospital and health system administrators will struggle over the next decade to staff key positions in an environment of cost constraints.

Meeting future workforce demands includes designing an effective workforce strategy, including the right training, and upskilling programs in place, effective recruitment, and retention strategies, implementing emerging technology, and creating a culture of change and value-based care. Join your peers at Public Sector Network's **Future of Work in Healthcare Virtual Event** to take away innovative planning strategies and processes that can support and sustain a coordinated, collaborative, and patient-centric approach to delivering care in the future.
