## Future-Proofing Canada's Public IT Services for Speed and Agility

Government departments face pressures from all sides, with regulators requiring robust data governance and citizens demanding the latest digital and mobile technologies. Legacy systems are riddled with redundancies and incompatibilities. Adopting the right technologies can help government to overcome these challenges and speed up service delivery while staying within budget. It is imperative that technologies focus on improving performance, productivity, efficiency, and security without sacrificing reliability or accessibility.

Even with exciting new tools and applications, the economy is volatile, and it is challenging to predict which technology will suit your organization best. Also critical to success, is the ability for IT leaders to train workforces to embrace and maximize future technologies and manage teams within the shifting nature of the tech-based workplace.

The 'Winter Edition' of National Insights in IT, is the culmination of the 2022 event series. As such, it will explore how the most innovative technologies can be leveraged to yield maximum efficiency and cross-departmental collaboration that will propel government into the future. Join us to hear practical case study sessions from tech-focused peers and discuss how to further develop and integrate consistent, cohesive IT infrastructure strategies across Canada's public sector.

### Who You'll Meet

- CIO/CTO/IT Director
- Chief Architect
- IT Infrastructure
- Enterprise Architecture
- Vendor Management
- IT Operations
- IT Procurement
- IT Applications
- IT Workforce Strategy
- Contract Management
